

HOSPITALITY CARD PROCESSING

Easily accept payments via your restaurant terminals

Restaurants must have credit card processing solutions that address their unique needs. NMI point of sale (POS) payment card processing allows restaurants to accept credit and debit cards, plus deliver industry-specific features to drive their business.

NMI gives restaurant POS software vendors and payment terminal resellers a payment gateway that integrates seamlessly with POS applications on PCs, tablets and handheld devices. It supports the broad range of payment methods used in restaurants today, including pay-at-table, phone or online order, and even curbside collection, kiosk and food truck.

EASY TO INTEGRATE

Implement NMI's POS integration either through our Software Development Kits (SDKs) or via the cloud with no need to install software on the POS computer or tablet.

- ChipDNA SDKs make integration as simple as possible
 - there's no need for highly skilled developers with payments expertise
- Full integration support provided at no extra cost
- Industry-leading standards of service availability, security and reliability

BENEFITS FOR RESTAURANT POS

Today, restaurants need help more than ever. Contact NMI to learn how one simple and fast integration can supercharge your software and help your restaurant customers to not just survive the current situation, but thrive in the months and years to come.

- Quick and easy integration with your chosen POS software for the fastest time to market
- Face-to-face and online payments seamlessly combined in a single unified reporting system so you see all your transactions in one place
- A choice of both terminals and processors so you can deploy the best device for your application
