RETAIL CARD PROCESSING

Add seamless payments acceptance to your POS software

NMI's payment gateway offers the utmost security and availability for POS software vendors and payment terminal resellers. It works seamlessly with POS applications running on a PC or tablet, supporting all major card types. It can be integrated using Software Development Kits (SDKs), or can be cloud-based with no need to install software on the POS device. Comprehensive reporting allows your merchants to monitor the performance of a single store or an entire chain in real time.

- ChipDNA SDKs make integration simple, with no need for highly skilled developers with payments expertise

- Full integration support provided at no extra cost

- Industry-leading standards of service availability, security and reliability

- Full multi-currency capability for international payments

- Support for advanced retail features such as Dynamic Currency Conversion (DCC)

- True omni-channel capability — retail, ecommerce, and even self-service

BENEFITS OF NMI'S PAYMENT GATEWAY FOR RETAIL POS

Quick and easy integration with your chosen POS software for the fastest time to market

Retail and online payments seamlessly combined in a single unified reporting system with all transactions in one place

A choice of both terminals and processors so you can deploy the best device for your application
